

## REPTILE AND AMPHIBIAN STUDY MERIT BADGE WORKBOOK

This Scoutmaster Bucky Merit Badge Workbook is based off the current *Scouts BSA Requirements*.

Consider also using the Reptile and Amphibian Study merit badge class preparation page for clarification and expectations when participating in a Scoutmaster Bucky merit badge opportunity ([online](#) or [in-person](#)).

Scout's  
Name:

**REQUIREMENT 1:** Describe the identifying characteristics of six species of reptiles and four species of amphibians found in the United States. For any four of these, make sketches from your own observations or take photographs. Show markings, color patterns, or other characteristics that are important in the identification of each of the four species. Discuss the habits and habitats of all 10 species.

**REQUIREMENT 2:** Discuss with your merit badge counselor the approximate number of species and general geographic distribution of reptiles and amphibians in the United States. Prepare a list of the most common species found in your local area or state.

**REQUIREMENT 3:** Describe the main differences between:

**REQUIREMENT 3 A:** Amphibians and reptiles

**REQUIREMENT 3 B:** Alligators and crocodiles

**REQUIREMENT 3 C:** Toads and frogs

**REQUIREMENT 3 D:** Snakes and lizards

**REQUIREMENT 4:** Explain how reptiles and amphibians are an important component of the natural environment. List four species that are officially protected by the federal government or by the state you live in, and tell why each is protected. List three species of reptiles and three species of amphibians found in your local area that are not protected. Discuss the food habits of all 10 species.

**REQUIREMENT 5:** Compare how reptiles reproduce to how amphibians reproduce.

**REQUIREMENT 6:** From observation, describe how snakes move forward. Describe the functions of the muscles, ribs, and belly plates.

**REQUIREMENT 7:** Describe in detail six venomous snakes and the one venomous lizard found in the United States. Describe their habits and geographic range. Tell what you should do in case of a bite by a venomous species.

First snake

Second snake

Third snake

Fourth snake

Fifth snake

Sixth snake

Lizard

What to do in case of a bite

**REQUIREMENT 8:** Do ONE of the following:

**REQUIREMENT 8 A:** Maintain one or more reptiles or amphibians for at least a month. Record food accepted, eating methods, changes in coloration, shedding of skins, and general habits; or keep the eggs of a reptile from the time of laying until hatching; or keep the eggs of an amphibian from the time of laying until their transformation into tadpoles (frogs) or larvae (salamanders). Whichever you chose, keep records of and report to your counselor how you cared for your animal/eggs/larvae to include lighting, habitat, temperature, and humidity maintenance, and any veterinary care requirements.

NOTE: Scouts must not use venomous reptiles in fulfilling requirement 8a. Species listed by federal or state law as endangered, protected, or threatened must not be used as live specimens in completing requirement 8a. When you decide keeping your specimen is no longer possible or desired, be sure to find another appropriate home for it or return it to the wild at the location of capture. Check with your merit badge counselor for those instances where the return of these specimens would not be appropriate.

Under the Endangered Species Act of 1973, some plants and animals are, or may be, protected by federal law. The same ones and/or others may be protected by state law. Be sure that you do not collect protected species.

Your state may require that you purchase and carry a license to collect certain species. Check with the wildlife and fish and game officials in your state regarding species regulations before you begin to collect.

**REQUIREMENT 8 B:** Choose a reptile or amphibian that you can observe at a local zoo, aquarium, nature center, or other such exhibit (such as your classroom or school). Study the specimen weekly for a period of three months. At each visit, sketch the specimen in its captive habitat and note any changes in its coloration, shedding of skins, and general habits and behavior. Discuss with your counselor how the animal you observed was cared for to include its housing and habitat, how the lighting, temperature, and humidity were maintained, and any veterinary care requirements. Find out, either from information you locate on your own or by talking to the caretaker, what this species eats and what are its native habitat and home range, preferred climate, average life expectancy, and natural predators. Also identify any human-caused threats to its population and any laws that protect the species and its habitat. After the observation period, share what you have learned with your counselor.

**REQUIREMENT 8 9:** Do TWO of the following:

**REQUIREMENT 8 9 A:** Identify at night three kinds of toads or frogs by their voices. Imitate the song of each for your counselor. Stalk each with a flashlight and discover how each sings and from where.

**REQUIREMENT 8 9 B:** Identify by sight eight species of reptiles or amphibians.

Completed

**REQUIREMENT 8 9 C:** Using visual aids, give a brief talk to a small group on three different reptiles and amphibians.

Completed

**REQUIREMENT 10:** Tell five superstitions or false beliefs about reptiles and amphibians and give a correct explanation for each. Give seven examples of unusual behavior or other true facts about reptiles and amphibians.

Five superstitions or false beliefs and correct explanations
